

ANSI C with elements of C⁺⁺

Task List 8

Due on 30.11.2011 + one week

The topic of these exercises is Gtk+. Since I also do not know much about this topic, I made two easy exercises:

1. Enter the example from the slides of the course 'Okienka z przyciskiem' and compile it.

In order to compile a program with Gtk, type

```
gcc test.c -o test -std=c99 `pkg-config --cflags gtk+-2.0 --libs gtk+-2.0`
```

where `test.c` is the name of your programme.

2. Also, compile the program 'Hello World in GTK', that you can find on http://www.gtk.org/tutorial1.2/gtk_tut-2.html, and make sure that you understand it.
