

Introduction to Flight Simulation (List 5)

Due: 16 november 2010

The topic of this exercise is Open GL. We are going to build a dream house for Paweł and Agnieszka.

1. Copy the code `house.cpp` from the course homepage. The code draws a big green area, and a beautiful blue sky. Everytime when you press F1, the world rotates a little. The house should be built on position $(0, 0, 0)$.
2. The architect already designed the house. It is called `housedesign.pdf` and can be downloaded from the course homepage. Extend `house.cpp`, so that it draws the house.
